EDUCATION

University of Maryland, College Park | College Park, MD

Expected May 2028

Bachelor of Science in Computer Engineering

Relevant Coursework: Algorithms, Computer Systems and Organization, Digital Logic Design, Applied Probability and Statistics

EXPERIENCE

GSAlpha Labs LLC

May 2026 – Present

Software Engineering Intern

- Built a Dockerized FastAPI and SQL pipeline aggregating filings, transcripts, presentations, and news across 52 public companies into a centralized research database.
- Built a Next.js research platform surfacing company catalysts, risks, and financial changes to accelerate investment decisions.
- Built AI extraction workflows that analyzed 350+ filings and 1,800+ articles, surfacing material developments and source-backed research signals.

SEDS at UMD

Sep 2024 – Feb 2026

Software Engineer

- Built a reusable Python testing framework for 26 FPGA modules, identifying logic and integration defects before deployment.
- Reduced simulation time by 60% by running independent FPGA tests in parallel on a shared Linux server.
- Standardized build and testing workflows for 26 Verilog modules, making results more consistent across the development.

The Marine Mammal Center

Jun 2025 – Jul 2025

Software Engineering Intern

- Built a Docker-based CI pipeline that automatically ran unit, integration, and end-to-end tests before release.
- Reduced release validation time by 75%, from 40 minutes to under 10, by automating 20+ QA checks in Python.
- Developed a Node.js validation tool that checked dependencies and application files for errors before deployment.

XR EDU | San Ramon, CA

Aug 2023 – Jun 2024

Software Engineer & Technical Lead

- Shipped 5+ Unity and C# immersive-learning applications used across 15+ workshops serving 50+ students.
- Developed reusable Unity systems for controller input, physics interactions, scene transitions, and VR headset compatibility.

PROJECTS

ForgeGrid: Distributed Game Build System | Node.js, JavaScript, Docker

Jul 2026 - Aug 2026

- Built a distributed build system that split a playable game into 7 tasks across independent Node.js workers.
- Cut build time by 59%, from 2.5 to 1.0 seconds across 3 workers, and added benchmarks for 1 to 8 workers.
- Reused all 7 tasks on repeat builds with content-based caching and recovered automatically from worker failures.

ClosetAI | Next.js, TypeScript, FastAPI, PostgreSQL

May 2026 – Jun 2026

- Built a computer-vision pipeline that cleaned clothing photos and identified 10 attributes across 500+ wardrobe items.
- Developed an outfit recommendation engine that scored 10,000+ clothing combinations using weather, occasion, compatibility, and user feedback.
- Deployed a full-stack application with AI tagging, wardrobe search, saved outfits, and recommendations generated in under two seconds.

Pokémon Showdown RL Agent | Python, PPO, PyTorch, Playwright, Gymnasium

Mar 2026 – Apr 2026

- Trained a PPO reinforcement-learning agent using 100+ battle features, achieving a 79% win rate against baseline opponents.
- Built a Playwright-based tool that played live battles and recorded complete match logs for debugging and analysis.
- Built a reproducible evaluation pipeline that ran 2,000+ matches and compared policy versions by win rate and opponent strength.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C, SQL, Verilog

Frameworks: FastAPI, React, Next.js, Node.js, PyTorch, Playwright, SQLAlchemy

Tools: PostgreSQL, Supabase, NumPy, SciPy, Pandas, Git, Docker, GitHub Actions, Vercel, Linux
