EDUCATION

University of Maryland, College Park

Bachelor of Science in Computer Engineering

- Relevant Coursework: Data Structures, Algorithms, Object-Oriented Programming, Computer Systems, Computer Architecture

College Park, MD

Expected May 2028

EXPERIENCE

Students for the Exploration and Development of Space (SEDS)

Sep. 2024 – Feb. 2026

Software Engineer

College Park, MD

- Built a GitHub Actions and Claude API review pipeline that generated routine PR feedback and reduced review turnaround by 40%
- Standardized dev environments with Docker Compose across a 10+ engineer team, reducing local setup issues
- Enforced CI reliability using branch protection, required checks, structured logs, and CI summaries to speed up failed-run debugging

The Marine Mammal Center

Jun. 2025 – Jul. 2025

Software Engineering Intern

Sausalito, CA

- Created a Docker-based CI/CD pipeline with automated unit, integration, and E2E tests to catch regressions before release
- Automated 20+ manual validation steps with Python, reducing release verification time from 40+ minutes to under 10
- Developed Node.js tooling for versioned asset retrieval, reducing stale deployment failures by approximately 25%

XR EDU

Aug. 2023 – Jun. 2024

Software Engineer

San Ramon, CA

- Optimized PostgreSQL queries and indexing, reducing API latency by 58% under production load
- Built internal React dashboards for real-time latency and error tracking, improving debugging speed
- Standardized Git workflows across a 7-engineer team, reducing merge conflicts and improving development velocity

PROJECTS

AI Equity Research Platform ↗ | *Next.js, TypeScript, Supabase, Claude API*

Mar. 2026 – Apr. 2026

- Built a Next.js and TypeScript app with 3 AI agents for company deep dives, peer valuation, and bear-case investment memos
- Engineered a 4-layer data fallback chain across Supabase, FMP, Finnhub, SEC filings, and Stooq to improve report reliability
- Added Supabase auth, saved reports, watchlists, and PDF export workflows, turning AI outputs into reusable investor research artifacts

Polymarket Trading Agent ↗ | *Python, FastAPI, SQLAlchemy, PostgreSQL*

Jan. 2026 – Feb. 2026

- Designed a 7-service event-driven paper-trading backend to scan markets, generate signals, manage risk, execute trades, and track settlement
- Created signal and risk engines with bankroll-aware sizing, exposure limits, and ML-backed trade signals across 9 SQLAlchemy entities
- Implemented post-trade analytics tracking win rate, expected value, closing-line movement, and bankroll exposure across 200+ simulated trades

Earnings Beat/Miss Predictor ↗ | *Python, FastAPI, React, XGBoost, AWS*

Oct. 2025 – Dec. 2025

- Built a Python, FastAPI, React, and XGBoost platform using 10+ leakage-safe features from price, volatility, analyst, and financial data
- Implemented time-aware rolling backtests scored with ROC-AUC, F1, calibration buckets, and sector-level breakdowns
- Deployed an AWS inference pipeline with GitHub Actions CI for backend pytest and frontend production builds

F1 Analytics Platform ↗ | *Python, React, TypeScript, XGBoost, Docker*

Feb. 2025 – Mar. 2025

- Ingested FastF1 race telemetry into SQLite-backed features and trained an XGBoost finishing-position predictor
- Developed a React and TypeScript frontend with session selection, telemetry replay controls, leaderboard views, and prediction cards
- Containerized with Docker Compose and added GitHub Actions CI for backend tests and frontend production builds

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, Java, C++, C, SQL

Cloud & Infra: AWS Lambda, ECS, S3, RDS, API Gateway, Docker, Terraform, GitHub Actions

Frameworks: FastAPI, React, Next.js, Node.js, SQLAlchemy

Data/ML: XGBoost, PyTorch, Pandas, NumPy, scikit-learn, PostgreSQL, MongoDB, DynamoDB
