EDUCATION

University of Maryland, College Park

Bachelor of Science in Computer Engineering

College Park, MD

Expected May 2028

- Relevant Coursework: Computer Systems (C), Digital Logic Design (Verilog), Algorithms (Java), Programming Languages (OCaml, Rust), Digital Circuits & FPGA Lab, Computer Organization

EXPERIENCE

GSAlpha Lab – Software Engineering Intern

May 2026 – Present

- Built a FastAPI ingestion pipeline for SEC filings from 52 public companies, extracting financial metrics and event signals for research workflows
- Shipped a Vercel dashboard with freshness checks and failure logs to track stale filings and broken jobs across tracked companies
- Extended coverage to foreign issuers, syncing 350+ filings and 1,800+ news articles into a unified research workspace

SEDS at UMD – Software Engineer

Sep. 2024 – Feb. 2026

- Built Python testbenches for 26 FPGA modules, catching RTL logic bugs before hardware deployment
- Cut simulation runtime 60% by parallelizing module tests across a shared SSH server
- Unified builds across 26 modules with shared configs and auto-generated Verilog from SpinalHDL

The Marine Mammal Center – Software Engineering Intern

Jun. 2025 – Jul. 2025

- Built a Docker testing pipeline with unit, integration, and E2E checks to catch regressions before release
- Cut release validation from 40 minutes to under 10 by automating 20+ manual QA steps with Python
- Reduced deployment failures 25% with a Node.js tool that fetches required assets and validates them before deploy

XR EDU – Software Engineer

Aug. 2023 – Jun. 2024

- Cut API response time 58% by profiling slow queries and adding indexes to high-traffic database tables
- Built a live dashboard showing slow requests and errors across the stack to speed up debugging
- Set up Git workflows and branch rules for a team of 7, reducing merge conflicts and review friction

PROJECTS

AI Equity Research Platform | *Next.js, TypeScript, Supabase, LLMs*

Mar. 2026 – Apr. 2026

- Built a multi-agent AI system that writes company deep dives, competitor analysis, and risk reports
- Integrated Supabase, FMP, Finnhub, and Stooq data sources so every report is grounded in real market data
- Added auth, watchlists, saved reports, and PDF export for sharing AI-generated research

Pokemon Showdown RL Agent | *Python, PPO, Playwright, Gymnasium*

Apr. 2026 – Jun. 2026

- Trained a PPO battle agent using 100+ game-state features, reaching 79% win rate against baseline bots
- Built a Playwright CLI that plays live Showdown battles using model inference and records them as video
- Ran 2,000+ matches between model versions with an auto-ranking leaderboard to track improvements

Polymarket Trading Agent | *Python, FastAPI, SQLAlchemy, PostgreSQL, AWS*

Jan. 2026 – Feb. 2026

- Built a trading engine that auto-sizes positions, enforces risk limits, and settles 200+ simulated trades
- Tracked win rate and PnL per trade so underperforming strategies get flagged within hours
- Designed 7 modular backend services for market scanning, bet sizing, execution, and settlement

F1 Analytics Platform | *Python, Pandas, NumPy, XGBoost, React, TypeScript, Docker*

Feb. 2025 – Mar. 2025

- Trained an XGBoost model on 30+ telemetry features from FastF1 to predict race finishing positions
- Built a live dashboard with leaderboards, telemetry charts, and qualifying replays, shipped with Docker and CI

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C, SQL, Verilog

Backend/Data: FastAPI, Node.js, PostgreSQL, Supabase, SQLAlchemy, Pydantic

Frontend: React, Next.js

Tools/Infra: Git, Docker, GitHub Actions, AWS, Vercel, Playwright

ML/Data: PyTorch, XGBoost, Pandas, NumPy
